

Analysis Families: Methodologies and Metrics

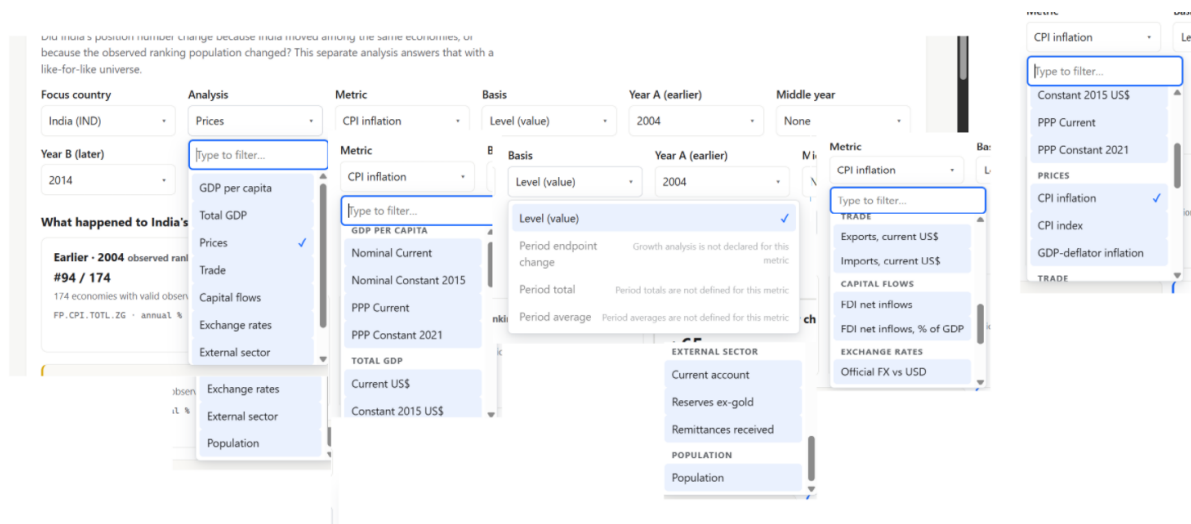

Lets First Understand what Analysis and their respective metric my site offers

Analysis - Family with metric

1. Total Gdp - this family offers, Mteric -> [Nominal current GDP, const real gdp, PPP current, PPP const]
2. Gdp per capita - this family offers, Metric -> [nomial current cpaita, real const capita, ppp current capita, ppp const capita]
3. prices -> metric [cpi inflation, cpi index, gdp deflator inflation]
4. Trade -> metric [current US \$ Exports, Current US \$ imports]
5. capita flows (fdi) -> metric [FDI Net inflows, FDI NET inflows % of GDP]
- 6 Exchange rate -> Metrci [official FX vs USD]
7. EXTERNAL sector -> [Current account, Reserve ex - gold, remittances received]
8. population -> metric [popualtion]

Here are Reference pictures ->

1.

u can also see basis options here .

You will notice like for like comparison, its just common economies format across the years, for example if comparison is happening between 2004, 2014, 2024, then intersection of these all taken to get common economies throught their years. For fair comparison

Analysis Families: Methodologies and Metrics

Now let's discuss how my site uses methodology to do analysis over those in movement tab- it features -> start, middle and end year, middle year is optional because it acts as a point breaker like if one has to compare a decade like 2004 to and 2014 and 2014 to 2024, so start year = 2004, middle year = 2014, end year = 2024.

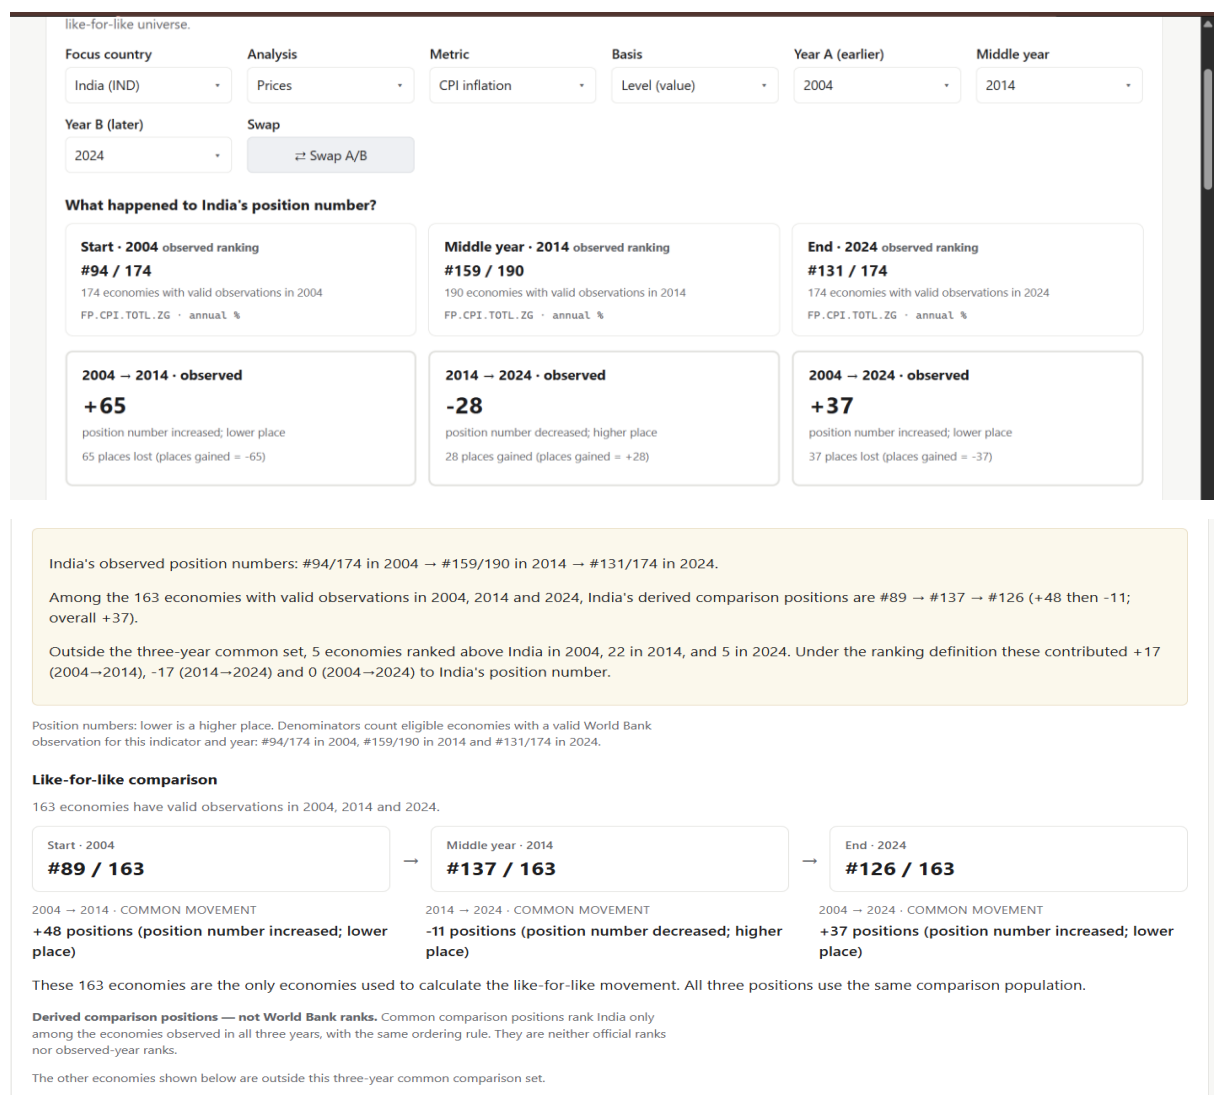

Methodology to perform analysis for total gdp and gdp seems to be fine across any metrics.

But I have doubt on other methodology used to perform analysis across other analysis and their metrics.

Let's discuss them-

1 Analysis – Price

A. Metric cpi inflation- Basis choosed [Level Value]

Analysis Families: Methodologies and Metrics

So I suppose this basis is rank based.

And only Basis level is available for this metric i.e. cpi inflation

The screenshot shows the analysis tool interface for CPI inflation. The 'Focus country' is India (IND), 'Analysis' is Prices, and 'Metric' is CPI inflation. The 'Basis' dropdown is open, showing 'Level (value)' as the selected option. The 'Year A (earlier)' is 2004 and the 'Middle year' is 2014. The 'Year B (later)' is 2024. A 'Swap' button is available. The 'What happened to India's position number?' section shows the start ranking in 2004 as #154 / 174 and the middle year ranking in 2014 as #150 / 160.

B. Analysis Prices – metric CPI index

The screenshot shows the analysis tool interface for CPI index. The 'Focus country' is India (IND), 'Analysis' is Prices, and 'Metric' is CPI index. The 'Basis' dropdown is open, showing 'Level (value)' as the selected option. The 'Year A (earlier)' is 2004 and the 'Middle year' is 2014. The 'Year B (later)' is 2024. A 'Swap' button is available. The 'What happened to India's position number?' section shows the start ranking in 2004 as #154 / 174 and the middle year ranking in 2014 as #150 / 160. A message states: 'No data available for this selection.' Another message states: 'No decomposition available (RANK UNSUPPORTED). The observed sets and denominators are not reported more granularly.'

No data available for it.

C. Analysis Prices ->Gdp deflator inflation

Only level basis available for it

The screenshot shows the analysis tool interface for GDP deflator inflation. The 'Focus country' is India (IND), 'Analysis' is Prices, and 'Metric' is GDP-deflator inflation. The 'Basis' dropdown is open, showing 'Level (value)' as the selected option. The 'Year A (earlier)' is 2004 and the 'Middle year' is 2014. The 'Year B (later)' is 2024. A 'Swap' button is available. The 'What happened to India's position number?' section shows the start ranking in 2004 as #103 / 204 and the middle year ranking in 2014 as #132 / 210.

Analysis Families: Methodologies and Metrics

What happened to India's position number?

Start · 2004 observed ranking #103 / 204 204 economies with valid observations in 2004 NY.GDP.DEFL.KD.ZG · annual %	Middle year · 2014 observed ranking #132 / 210 210 economies with valid observations in 2014 NY.GDP.DEFL.KD.ZG · annual %	End · 2024 observed ranking #54 / 200 200 economies with valid observations in 2024 NY.GDP.DEFL.KD.ZG · annual %
2004 → 2014 · observed +29 position number increased; lower place 29 places lost (places gained = -29)	2014 → 2024 · observed -78 position number decreased; higher place 78 places gained (places gained = +78)	2004 → 2024 · observed -49 position number decreased; higher place 49 places gained (places gained = +49)

India's observed position numbers: #103/204 in 2004 → #132/210 in 2014 → #54/200 in 2024.

Among the 193 economies with valid observations in 2004, 2014 and 2024, India's derived comparison positions are #96 → #119 → #48 (+23 then -71; overall -48).

Outside the three-year common set, 7 economies ranked above India in 2004, 13 in 2014, and 6 in 2024. Under the ranking definition these contributed +6 (2004→2014), -7 (2014→2024) and -1 (2004→2024) to India's position number.

Position numbers: lower is a higher place. Denominators count eligible economies with a valid World Bank observation for this indicator and year: #103/204 in 2004, #132/210 in 2014 and #54/200 in 2024.

Like-for-like comparison

193 economies have valid observations in 2004, 2014 and 2024.

Start · 2004 #96 / 193	→ Middle year · 2014 #119 / 193	→ End · 2024 #48 / 193
2004 → 2014 · COMMON MOVEMENT +23 positions (position number increased; lower place)	2014 → 2024 · COMMON MOVEMENT -71 positions (position number decreased; higher place)	2004 → 2024 · COMMON MOVEMENT -48 positions (position number decreased; higher place)

These 193 economies are the only economies used to calculate the like-for-like movement. All three positions use the same comparison population.

Derived comparison positions — not World Bank ranks. Common comparison positions rank India only among the economies observed in all three years, with the same ordering rule. They are neither official ranks nor observed-year ranks.

The other economies shown below are outside this three-year common comparison set.

What changed outside the common comparison set?

Economies outside the three-year common set are missing in at least one of 2004, 2014 or 2024. They explain the difference between each full observed population and the shared common universe.

2004 observed set	193 common	11 outside in this year	204 = 193 + 11
2014 observed set	193 common	17 outside in this year	210 = 193 + 17
2024 observed set	193 common	7 outside in this year	200 = 193 + 7

Common means the same member economies in all three years. Outside means missing in at least one selected year.

Outside-common-set economies above India

ABOVE INDIA IN 2004 7	ABOVE INDIA IN 2014 13	ABOVE INDIA IN 2024 6	OBSERVED-SET EFFECT 2004→2014 +6 positions (position number increased; lower place)	OBSERVED-SET EFFECT 2014→2024 -7 positions (position number decreased; higher place)
---------------------------------	----------------------------------	---------------------------------	---	--

OBSERVED-SET EFFECT 2004→2024
-1 positions (position number decreased; higher place)

Analysis Families: Methodologies and Metrics

By now im gonna put ScreenShot only from there u can analyse which analysis, metric and basis.

2. Analysis Trade- Metric Exports- basis Level value

Rank movement comparison

Did India's position number change because India moved among the same economies, or because the observed ranking population changed? This separate analysis answers that with a like-for-like universe.

Analysis Families: Methodologies and Metrics

M basically here i feel the analysis methodology is wrong for the metric analysis capital flow (fdi), by annual % flow basis, for year 2004 to 2014 to 2024 (edited)

basically comparing two decades from 2004 to 2014 and 2014 to 2024

so what is it doing that , it takes 2004 fdi raw value 5.53 billion and 2014 raw value 35 billion and calc % increase b/w yar each of the two years and then comapre with the year 2014 raw value and the year 2024 raw value % increase (edited)

? C++ so what is it doing that , it takes 2004 fdi raw value 5.53 billion and 2014 raw value 35 billion ,

? C++ Yesterday at 7:48 PM

and i think is wrong (edited)

becuz its ignroing in between years of both decades like 2005 to 2013 (8 years) values (edited)

so for this analysis metric, i find this methodology wrong (edited)

it should take each year fdi raw value into account to compare which decade did better (edited)

but end point analysis is fine for gdp (total gdp n capita) values, example for year 2004 gdp 1 and 2014 gdp 2, annual increase by 100% (edited)

but the same methodology doesnt fit for fdi, becuz i think for fdi, it should take each year values wat do u think

? C++ Yesterday at 8:16 PM

therefore , for some metric end point year matters and for some metric each and all individual year matters , for performing economic analysis

Therefore I find this methodology wrong resulting in wrong and misleading stats

position number decreased; higher place

20 places gained (places gained = +20)

2004 → 2024 · observed

+121

position number increased; lower place

121 places lost (places gained = -121)

India's observed position numbers: #40/161 in 2004 → #181/189 in 2014 → #161/165 in 2024.

Among the 141 economies with valid observations in 2004, 2014 and 2024, India's derived comparison positions are #37 → #133 → #137 (+96 then +4; overall +100).

Outside the three-year common set, 3 economies ranked above India in 2004, 48 in 2014, and 24 in 2024. Under the ranking definition these contributed +45 (2004→2014), -24 (2014→2024) and +21 (2004→2024) to India's position number.

Position numbers: lower is a higher place. Denominators count eligible economies with a valid World Bank observation for this indicator and year: #40/161 in 2004, #181/189 in 2014 and #161/165 in 2024.

Like-for-like comparison

141 economies have valid observations in 2004, 2014 and 2024.

Start · 2004

#37 / 141

→

Middle year · 2014

#133 / 141

→

End · 2024

#137 / 141

2004 → 2014 · COMMON MOVEMENT

+96 positions (position number increased; lower place)

2014 → 2024 · COMMON MOVEMENT

+4 positions (position number increased; lower place)

2004 → 2024 · COMMON MOVEMENT

+100 positions (position number increased; lower place)

These 141 economies are the only economies used to calculate the like-for-like movement. All three positions use the same comparison population.

Derived comparison positions — not World Bank ranks. Common comparison positions rank India only among the economies observed in all three years, with the same ordering rule. They are neither official ranks nor observed-year ranks.

The other economies shown below are outside this three-year common comparison set.

What changed outside the common comparison set?

Economies outside the three-year common set are missing in at least one of 2004, 2014 or 2024. They explain the difference between each full observed
